

## Kompositionsschemata eigenrealer Zeichenklassen

1. Ternäre Zeichenklassen und ihre quaternären trajektischen Erweiterungen kann man mittels kategorientheoretischer Kompositionsschemata darstellen (vgl. Toth 2026a). Auf diese Weise kommen „gappings“ und „overlappings“ besonders gut zum Ausdruck. Als Beispiel stellen wir die 6 eigenrealen Thematisierungen dar (vgl. Toth 2026b) dar. Die Kompositionsschemata berücksichtigen natürlich multi-sets.

### 2. Eigenreale Kompositionsschemata

$$\begin{array}{ccccccc}
 3.1 & 2.2 & 1.3 & \times & 3.1 & 2.2 & 1.3 & & I \rightarrow 0 \leftarrow M \\
 & & & & \Downarrow & & & & \Downarrow \\
 3.2 & 1.2 & 2.1 & 2.3 & \times & 3.2 & 1.2 & \underline{2.1} \quad \underline{2.3} & (I, M) \leftarrow (0, 0)
 \end{array}$$

$$\begin{array}{ccccccc}
 3.1 & 2.3 & 1.2 & \times & 2.1 & 3.2 & 1.3 & & 0 \rightarrow I \leftarrow M \\
 & & & & \Downarrow & & & & \Downarrow \\
 3.2 & 1.3 & 2.1 & 3.2 & \times & \underline{2.3} & 1.2 & 3.1 & \underline{2.3} & 0 \rightarrow (M, I) \leftarrow 0
 \end{array}$$

3.2	2.1	1.3	×	3.1	1.2	2.3		$I \rightarrow M \leftarrow O$
				↓				↓
3.2	2.1	2.1	1.3	×	3.1	<u>1.2</u> <u>1.2</u>	2.3	$I \leftarrow (M, M) \rightarrow O$

3.2 2.3 1.1 × 1.1 3.2 2.3

$M \rightarrow I \leftarrow O$

↓

↓

3.2 2.3 2.1 3.1 × 1.3 1.2 3.2 2.3

$(M, M) \rightarrow (I, O)$

1 2 3

1 2 3

3.3 2.1 1.2 × 2.1 1.2 3.3

$O \rightarrow M \leftarrow I$

↓

↓

3.2 3.1 2.1 1.2 × 2.1 1.2 1.3 2.3

$O \leftarrow (M, M) \rightarrow O$

1 2 3
