

Prof. Dr. Alfred Toth

Ontisch-semiotisches Analysemodell

1. Es wird ein einheitliches ontisch-semiotisches Analysemodell mit vier „Moduln“ vorgeschlagen: chiasmatischen Strukturschemata (vgl. Toth 2025a), topologischen Abbildungsschemata (vgl. Toth 2025b), Diamonds (vgl. Kaehr 2007) und Trajektogrammen (vgl. Toth 2025c).

2. Man kann triadische Zeichenklassen der Form

$$\text{Zkl} = (3.x, 2.y, 1.z)$$

als trajektische Dyaden darstellen (vgl. Toth 2025d)

$$(3.x, 2.y, 1.z) = ((3.2 \mid x.y), (2.1, y.z)),$$

wo wir also vier statt wie in Zkl drei Plätze haben. (Aus der Triadizität der Kategorien folgt natürlich, daß mindestens ein Wert doppelt auftritt.) Um das ontisch-semiotische Analysemodell einheitlich zu präsentieren, gehen wir von der Relation

$$R = (a.b, c.d)$$

aus.

2.1. Chiasmatische Strukturschemata

1. $(a.b, c.d) \rightarrow (a.c \mid b.d)$ (prozipativ-extern)

2. $(a.b, c.d) \rightarrow (b.d \mid a.c)$ (prozipativ-intern)

3. $(a.b, c.d) \rightarrow (d.b \mid c.a)$ (rezipativ-extern)

4. $(a.b, c.d) \rightarrow (c.a \mid d.b)$ (rezipativ-intern)

2.2. Topologische Abbildungsschemata

1. $(a.b, c.d) \rightarrow (a.c \mid b.d)$

2. $(a.b, c.d) \rightarrow (b.d \mid a.c)$

3. $(a.b, c.d) \rightarrow (d.b \mid c.a)$

$$4. (a.b, c.d) \rightarrow (c.a \mid d.b)$$

2.3. Diamonds

$$1. (a.b, c.d) \rightarrow (a.c \mid b.d)$$

$$2. (a.b, c.d) \rightarrow (b.d \mid a.c)$$

$$3. (a.b, c.d) \rightarrow (d.b \mid c.a)$$

$$4. (a.b, c.d) \rightarrow (c.a \mid d.b)$$

2.4. Trajektogramme

$$1. (a.b, c.d) \rightarrow (a.c \mid b.d)$$

2. $(a.b, c.d) \rightarrow (b.d \mid a.c)$

3. $(a.b, c.d) \rightarrow (d.b \mid c.a)$

4. $(a.b, c.d) \rightarrow (c.a \mid d.b)$
