Trajekte konverser Dualsysteme

1. Bei der Bestimmung der Interrelationen zwischen den beiden Realitätsthematiken von Zeichenklassen hatten wir gefunden, daß ZKl und RTh triadischen, KZKl und KRTh aber dyadischen Skopus haben (vgl. Toth 2025), vgl. z.B.

2. Im folgenden transformieren wir die Schemata aus Toth (2025) in ihre Trajekte und bestimmen wieder die chiasmatischen Relationen. Wir gehen wiederum vollständigen System der $3^3 = 27$ semiotischen Dualsysteme aus.

Wie man sieht, ist der chiastische Skopus unter der Transformation von Zeichenklassen und Realitätsthematiken zu ihren Trajekten konstant.
